

Pulsation

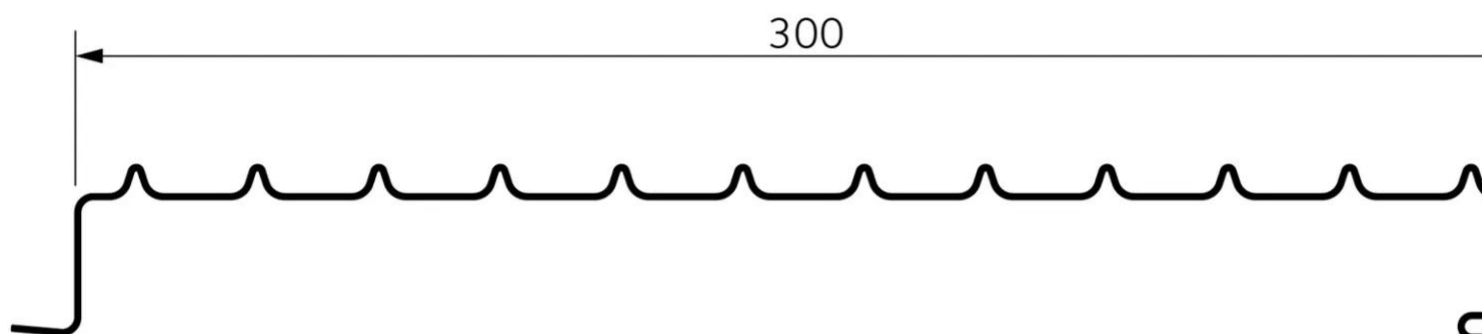

Pulsation is a siding with specific design made of pre-painted steel, stainless steel or aluminum. Its symmetrical fold forms a visual concept in its own right: the relief and depth of field ensure an unequalled play of light and shadow. Pulsation sidings are installed vertically with invisible fixing.

- Validated by CSTB according "Cahier N°3747 May 2014".
- Pulsation is used on masonry, on twin skin system, for new building or refurbishing.
- Installation in seismic area.
- Fire : incombustible.
- The wave, slightly rhythmic - 25 mm, allows to break with smooth facades
- Width: 300 mm
- Maximum length: 4000 mm
- Total height , wave included: 30 mm + 7 mm.
- Pulsation Evolution : possibility to reinforced the siding with a composite material for a better resistance against shocks. This re-enforced siding is also available with Flontec® the anti-graffiti coating.
