

Cofraplus® 60+

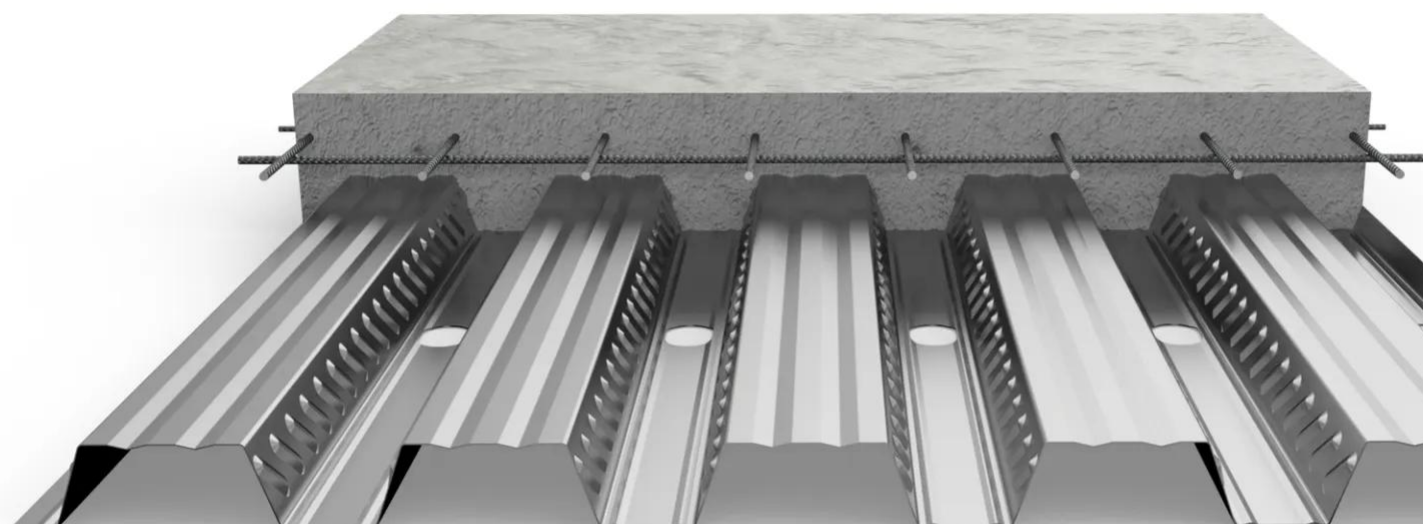

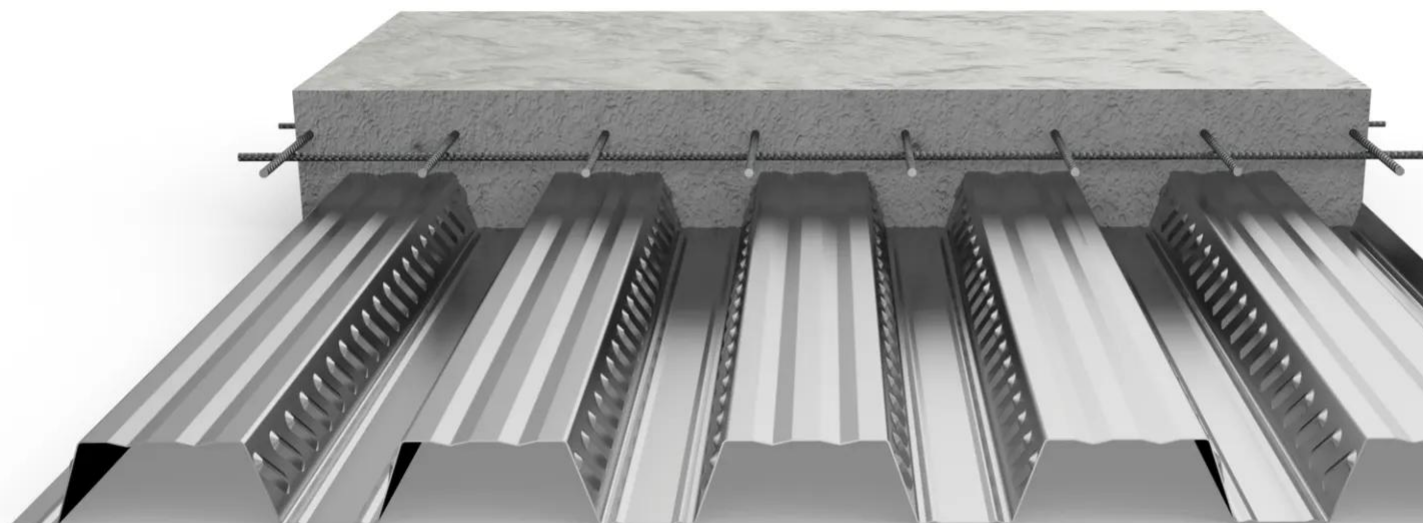

Cofraplus® 60+ enhanced profile is one of the most popular composite floor decking. With its trapezoidal shape, the metal floor system permits efficient transport and storage. The steel floor deck spans without any propping up to 3.40m and reduces considerably the self-weight of the final slab compared to any prefabricated concrete solution.

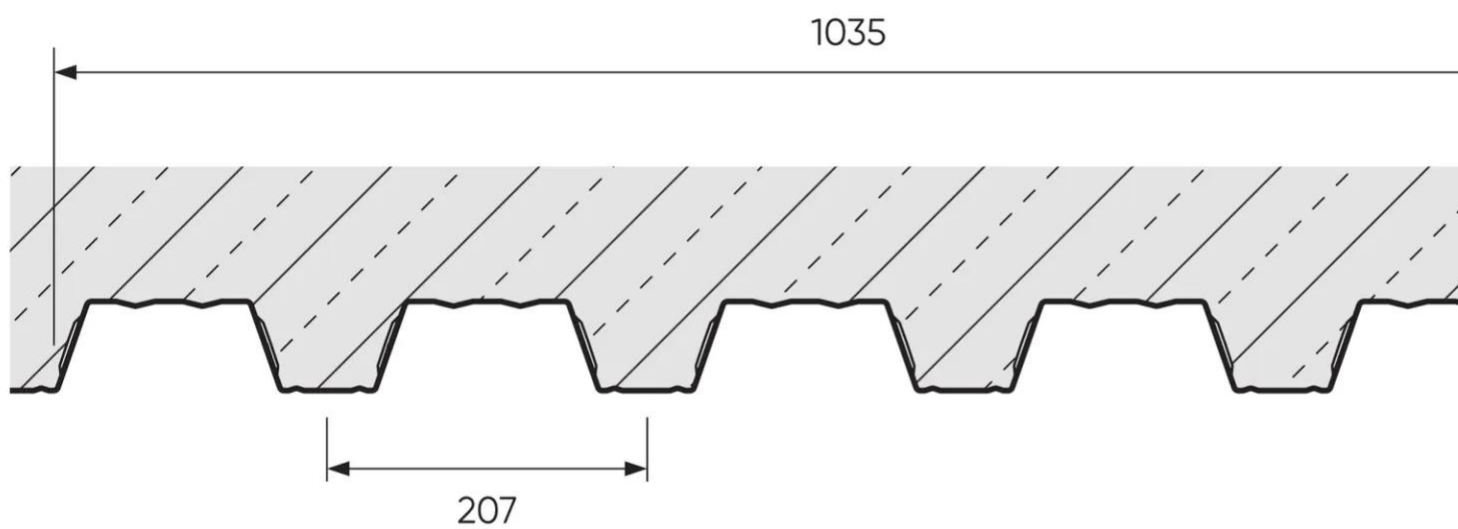

- Maximum spans up to 3.40m without props and until 6.50m with props.
- 30% weight reduction in comparison to a comparable prefabricated concrete slab floor
- Option of 2 different covers width to ensure a simple & fast installation:
1035mm with 5 ribs or 828mm with 4 ribs
- Reduced costs of supporting structures due to weight reduction
- Acoustic performance with R_w -values from 46dB to 53dB approved by CSTB
- Perfectly stackable for efficient transportation & storage at site
- The metal floor has a performing metallic coating ZMevolution®
- Floor decking can be pre-punched to pass shear connectors of the composite steel beam
