

# Supportsol® 133

Supportsol® 133 dry floor system is a trapezoidal steel profile combined with a wooden panel fixed to the upper flange of the metal sheet.This non-insulated system provides a lightweight solution, suitable for industrial storage system or your housing renovation project (extra floor, mezzanine...).

Associated with the wooden panel, Supportsol® 133 reaches large spans and high load bearing capacity.

- Lightweight floors (between 10.22 and 17.03 daN/m2 for the profile)
- Floors easy to build thanks to the wooden plate which avoid to pour concrete on site (dry solution)
- Economic solution
- Cover width of 864 mm
- Maximum spans up to 3.00 m
- Metallic floor supplied without the wooden panel
